

Zirro Spraymixer

A completely new concept
for efficient cleaning with
Z-Water and reusable
spray bottles

Check out the video to see how you can support
the green transition with Z-Water System and Zirro.

Let's reduce plastic waste

Z-Water System and Zirro are climate-smart solutions that help you avoid buying and discarding large amounts of single-use plastic bottles.

Choose the circular path with Z-Water and Zirro

By choosing the circular model offered by the Z-Water System, you can produce your own laundry, dish, and cleaning products directly on-site. Together with the reuse of bottles and canisters, you can significantly reduce climate emissions and cut costs for purchasing, transport, and handling of cleaning agents. This makes Z-Water an eco-friendly, and climate-smart cleaning solution.

Z-Water and Zirro – efficient cleaning and smart reuse

This is Zirro. It may look like a regular spray bottle, but it has two compartments instead of one. One bottle is filled with Z-Water – our Nordic Swan Ecolabelled cleaning water, free from harmful chemicals. The other bottle is filled with ordinary tap water. Z-Water and tap water are mixed in the spray handle to create an effective ready-to-use solution. It works perfectly as an all-purpose and sanitary cleaner, and is also ideal for kitchens, stainless steel, and glass surfaces.

So, how long does the water last? The tap water compartment on the Zirro bottle can be refilled up to eleven times before the Z-Water compartment needs refilling. This means that a 5-liter canister of Z-Water X-Power can produce up to 55 liters of effective cleaning solution. The Zirro bottle is equipped with a foam nozzle that eliminates harmful spray aerosols. It also features an ergonomic handle with soft edges and is slightly lighter than a standard 750 ml spray bottle.

Why use Z-Water and Zirro?

In addition to getting an effective cleaning agent suitable for most surfaces, you're also contributing to a greener future. With just one 5-liter canister of Z-Water and a Zirro spray bottle, you can generate the equivalent of up to 73 disposable 750 ml cleaning bottles – bottles that won't need to be thrown away or recycled. You help reduce resource use and minimize transport. Z-Water and Zirro help protect you and those around you from unnecessary chemicals – and our ecosystems from harmful microplastics.

Use Zirro for all cleaning needs

With extra bottles for lime-scale removal and disinfection, you can easily switch between cleaning agents for different tasks – using the same spray handle.
