

Zirro+Ztrila

– a perfect match

Check out the video to see how you can support the green transition with Z-Water System and Zirro.

Let's reduce plastic waste

Z-Water System and Zirro are climate-smart solutions that help you avoid buying and discarding large amounts of single-use plastic bottles.

What makes Zirro great?

Zirro is adaptable | Zirro is available in two versions, allowing for three mixing ratios of Z-Water and tap water. The green nozzle delivers a 10% concentrate mix, blue 20%, and removing both green and blue provides a 50/50 mix – a clever way to adjust the concentration levels.

Zirro has a foaming nozzle | The foam nozzle promotes healthier cleaning by eliminating the inhalation of aerosols.

Easy bottle swapping | The quick-release system lets you effortlessly switch between different bottles and cleaning agents.

*The dosing insert/nozzle is placed at the bottom of the suction tube and controls the amount of liquid drawn into the spray. On Zirro, the dosing insert is easy to attach and remove.

Z-Water and Zirro – efficient cleaning and smart reuse

Meet Zirro. At first glance, Zirro looks like an ordinary spray bottle – but it's far from it. It features a dual-chamber design: one chamber holds Z-Water – our Ecolabel-certified alkaline cleaning water free from harmful chemicals – while the other holds regular tap water. When you use the spray, the two liquids mix in the spray handle, creating a powerful ready-to-use solution. It's ideal as an all-purpose and sanitary cleaner, and works equally well in kitchens, on stainless steel, and on glass surfaces.

How long does the water last? The tap water chamber in the Zirro bottle can be refilled up to 11 times before you need to top up the Z-Water chamber. This means that one 5-liter canister of Z-Water X-Power yields up to 55 liters of effective cleaning solution. Zirro also comes with a foaming nozzle that eliminates harmful airborne spray mist (aerosols). The ergonomic handle with soft edges makes it comfortable to hold, and it's slightly lighter than a standard 750 ml spray bottle.

Why choose Z-Water and Zirro?

Not only do you get an effective cleaning product suitable for most surfaces, but you also support a greener future. With just one 5-liter canister of Z-Water and the Zirro spray bottle, you can replace up to 73 single-use 750 ml cleaning bottles – reducing plastic waste and the need for recycling. You help lower resource consumption and reduce transport emissions. Using Z-Water and Zirro means protecting yourself and those around you from unnecessary chemical exposure, while sparing the ecosystem from harmful microplastics.

Use Zirro for all cleaning needs

With extra bottles for lime-scale removal and disinfection, you can easily switch between cleaning agents for different tasks – using the same spray handle.

Smart Dosing!

With a light squeeze, the bottle dispenses just the right amount of cleaning solution – no aerosols, no fuss.

Why Ztrila Stands Out

Ztrila gives you just what you need | Whether you need a generous amount of cleaner for mops, sinks, or toilet bowls – or a more modest dose – Ztrila delivers.

Ztrila is gentle | Tired hands from constant spraying? With Ztrila, a gentle squeeze is all it takes.

Ztrila – Practical, Easy-to-Use Dosing Cap

Ztrila is a smart dosing cap that eliminates the need for spraying, protecting both your hands and lungs. It delivers the perfect amount of cleaner directly to a cloth or surface.

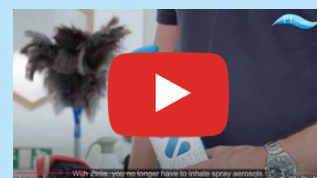

Ztrila includes a convenient hook that makes it easy to work with – and the hook fits most bottles with a trigger spray, pump top, or screw cap. It's compatible with all our Z-Water bottles: 500 ml, 750 ml, and 1 liter.

Both the Ztrila dosing cap and the hook are available in a variety of colors.

Colour Coding for Simpler Cleaning

Ztrila nozzles and hooks come in no fewer than seven colors, making it easy to colour-code bottles for different uses – or just pick your favorite colour. Which Ztrila suits you best?

Josefine from Städservice Blekinge Tries Zirro:

"Zirro feels great in the hand, and the easy bottle switching is such a smart feature... Wow, I really want one!"

Josefine Persson from Städservice Blekinge is one of our product testers. Her team handles home cleaning, window cleaning, post-construction cleaning, move-out cleans, and office cleaning. After trying Zirro for a few days, she's clearly impressed.

Her first impression was that Zirro looked bulky and heavy. That changed quickly:

"It's really easy to use and you can tell the spray handle and foam nozzle are high quality. With single-use bottles, the spray triggers often break before the bottle's empty – but not here."

Josefine uses Z-Water in both a regular spray bottle and with the Ztrila dosing cap:

"It works great on almost any surface. Ztrila is perfect when I need a larger amount of cleaning solution."

She sees the ability to change the cleaner bottle and nozzle types on Zirro as a big plus:

"Sometimes I need something strong for limescale. The quick-release is super handy – bottle change in a flash. And with the swappable dosing insert system, I can avoid overdosing, which is better for both health and the environment."

Her new bottle has even caught the eye of her coworkers:

"Everyone's really positive – I've had to keep an eye on my Zirro so it doesn't 'walk off'," Josefine laughs.

Linear or Circular – What Will You Choose?

The linear path goes from raw material to waste, with many emissions along the way – from production and packaging to transport and disposal. Most cleaning products follow this model.

Z-Water offers a circular alternative. One product, used across laundry, dishwashing, and cleaning. Our system is based on refilling and reusing bottles and canisters, drastically reducing emissions and environmental impact. Z-Water is a truly eco-friendly, climate-smart cleaning solution – unique on the market.
